

A-MORE — Team Guide Addendum

Front-end status & role change · June 2026 · supplements the original Team Guide

1. Role change

Michal and Liel have swapped tracks. Ownership is now:

- **Liel** — backend, NLP & data layer (server/, api/, nlp/, models/, db/, pipeline/quantify_experience.py).
- **Michal** — front-end (extension/, questionnaire/, dashboard/, assets/, pipeline/presentation.py).
- **Shir and Mai** — unchanged.

Consequently, To-Do items the original guide assigned to “Michal” are now Liel’s, and those assigned to “Liel” are now Michal’s.

2. What's done (front-end)

Item	Status
Extension target — switched from Tinder/Hinge to the OkCupid web client (Hinge has no web version). Manifest cleaned, toolbar icons added.	Done
Profile scraper — defensive selector map with fallbacks and a console helper (__amoreDebugScrape ()).	Done — live selectors pending tuning
Enabled toggle — the overlay now honors the popup on/off switch and reacts to it live (no reload).	Done
Dashboard states — loading + error banner with retry and a status line showing the active user/API.	Done
Real boxplots — true box-and-whisker via chartjs-chart-boxplot, with a graceful fallback.	Done
Selection logging — extension captures like/pass and posts to /selection (Decision-Alignment KPI).	Done (front-end)
Design system — shared assets/theme.css (vintage rose-gold); dashboard restyled, RTL.	Done (dashboard)

3. What's left

- **Live DOM selectors for OkCupid** (dom_scraper.js) — inspect a live profile and fill the SELECTORS map. (Michal)
- **POST /selection endpoint** — not yet in the backend; full spec in selection_endpoint_spec.md. (Liel)
- **Apply the design system** to the questionnaire and the extension popup/overlay. (Michal)
- **Questionnaire trigger** — triggers.md is a spec only. (Liel/Mai)
- **Backend follow-ups** — migrate the deprecated startup hook to lifespan; live Gemini key; pre-pilot hardening. (Liel)

4. Run notes (changes since the guide)

- The static dashboard/questionnaire now load fonts from Google Fonts and reference `../assets/theme.css` — keep serving the repo from its root (`python -m http.server 5500`).
- The dashboard loads the boxplot plugin from CDN immediately after Chart.js.
- The extension now matches `okcupid.com` only; load unpacked as before.
- Everything else in Section 7 (venv, uvicorn, seed, pytest) is unchanged; backend tests still pass (9/9).
